

RicoMic Zn

Amino acid based fertilizer with the added benefit of Zinc to prevent and correct Zinc deficiencies in crops

General Information

RicoMic Zn is a fully formulated liquid micronutrient fertilizer containing a high concentration of zinc for foliar application to prevent and treat zinc deficiency on a wide range of crops. Zn plays very important role in plant metabolism by influencing the activities of critical enzymes. Plant enzymes activated by Zn are involved in carbohydrate metabolism, maintenance of the integrity of cellular membranes, protein synthesis, regulation of auxin synthesis and pollen formation. The regulation and maintenance of the gene expression required for the tolerance of environmental stresses in plants are Zn dependent. RicoMic Zn is an amino chelate fertilizer contains considerable amounts of nitrogen in form of amino acids, which play an important role in supply of plant's nitrogen requirements. After it is inside the plant, the calcium is released and the remaining amino acids are used by the plant as a slow release source of nitrogen.

Advantages of RicoMic Zn

- Fast acting correction of Zn deficiencies
- Rapid leaf uptake and utilization
- Increase pollination and best flowering
- Prevent fruit fall
- Improve optimum fruits development

Guaranteed Analysis:

Organic Nitrogen: 2%, Chelated Zinc (Zn-Glycine): 7%

Recommendation for application:

Foliar application			Application time
Field crops	Trees	Greenhouses	
0.75-1 lit per ha	0.5-1 lit per 1000 lit water	0.5-1 lit per 1000 lit water	At the beginning of growing stage with split application

Caution:

- Apply fertilizer early morning or late evening
- Do not mix product with copper compounds, sulfate fertilizers and heavy metals compounds.
- Do not use this product on the stone fruits.
- Please do small foliar trial before spraying all the field.
- Keep out of the reach of children.
- Read the instructions carefully before use.
