

RicoTop

Biostimulant specifically for increasing fruit size and uniformity

General Information

RicoTop is a 100% organic fertilizer made of aminoacids and peptides, all of which are readily assimilated by plants. When applied on the leaves, this product is an efficient source of nutrients, as it provides the plants with the basic components that are necessary in the chemical reactions that bring to protein biosyntheins. RicoTop is a biostimulant specifically developed to increase the fruit size. Organic Carbon in RicoTop stimulate cell division and cell elongation, increasing the size of the cells by induction of protein synthesis. This results in healthier plants and increased crop production. Application of RicoTop promotes production of longer and more homogeneous fruits, which keep their flavor and consistency after harvest for a longer time. Other benefits include delayed senescence of leaves and better plant growth, being the result of a stimulated metabolism.

Advantages of RicoTop

- Increases the size and sugar concentration of fruit
- Improve fruit development
- Maintain the natural taste of the fruit in the post-harvest period
- Delayed senescence of leaves
- Stimulate metabolism and better plant growth
- Improves harvest yield

Compositions:

Total Nitrogen 3%, Organic Nitrogen 2%, Uric Nitrogen 1%, Soluble Potassium (K₂O) 7%, Organic Carbon 14%

Recommendation for application:

Crop	Foliar application (cc/100L)	Application time
Greenhouse	75-100	Apply 10 days after full flowering
Pome and stone fruit trees	75-100	Apply 10 days after full flowering
Vegetables	50-100	Apply 10 days after full flowering

Caution:

- Compatibility test with the intended mixing partners is recommended before practical use
- Apply fertilizer early morning or late evening
